DRIFT BOTTLE RECORDS FOR THE GULF OF MAINE, GEORGES BANK AND BAY OF FUNDY, 1956-58

by

Dean F. Bumpus

Contribution No. 1146 from the Woods Hole Oceanographic Institution

United States Fish and Wildlife Service
Special Scientific Report--Fisheries No. 378

Washington, D. C.
May 1961

This work was financed by the Bureau of Commercial Fisheries under Contract No. 14-17-008-62, with funds made available under the Act of July 1, 1954 (68 Stat. 376), commonly known as the Saltonstall-Kennedy Act.

DRIFT BOTTLE RECORDS FOR THE GULF OF MAINE, GEORGES BANK AND BAY OF FUNDY, 1956-58

by

Dean F. Bumpus

The drift-bottle data tabulated here are the result of extended studies by the United States Fish and Wildlife Service, the Fisheries Research Board of Canada, and the Woods Hole Oceanographic Institution in the Gulf of Maine area.

Since the previous data report, Bumpus and Day (1957), drift bottles have not only been released during voyages of research vessels in the area but also from Lightships and the U.S. Air Force Texas Towers. One set of data, *Crawford* 18, represents bottles released in Raleigh Bay off North Carolina. A number of bottles launched prior to the autumn of 1959 have been reported since the above-mentioned report went to press. These are included as an appendix as is one return from *T. N. Gill* Cruise 8, supplementary to those reported by Anderson and Gehringer (1959).

Some of the results of these and previous data are reported by Bumpus (1960). The several thousand drift bottles released during 1957 and 1958, as part of the Passamaquoddy Fisheries Investigations, are not included here. The results of that study are found in Chevrier and Trites (1960).

The drift bottle paths, drawn on the accompanying figures, were deduced in a manner similar to that described by Day (1958). Briefly, the final paths drawn on each chart resulted from constructing a consistent field of motion for any given set of data, commencing with the shortest drifts in both time and distance and continuing until all paths had been drawn.

Note.--Dean F. Bumpus, Oceanographer, Woods Hole Oceanographic Institution, Woods Hole, Mass.

Bottle Type and Distribution

The bottles used were those commonly employed for carbonated drinks. They were of clear glass and measured approximately 8 1/2 inches high and 2 1/4 inches in diameter with a capacity of 8 fluid ounces. Dry sand ballast was added to the majority of the bottles with the intention that they should float vertically at or near the surface and thus be less influenced by the action of winds and breaking waves. Where bottles were not ballasted, it is so indicated.

The Data

The original data are on file at the Woods Hole Oceanographic Institution, where a punch card system is maintained and supplemented as new returns are received and further studies initiated.

The listings below include all recoveries on record as of August 31, 1960, from the following cruises and static locations. Diagrams of the surface circulation as deduced from the recoveries of the drift bottles launched on these cruises accompany the data.
